

Product Name: VOLTERRA 30 MG TABLETS

Active Substances:30 mg trospium klorid

Form: 50 film-coated tablets

Therapeutic indications: It is indicated in the symptomatic treatment of the increase in the frequency of urination (pollakuria) seen in the following situations.

*Non-hormonal and non-organic vegetative bladder dysfunctions(symptomatic irritable bladder, sensory urge incontinence).

*In the presence of spastic neurologenic bladder(detrusor hyperreflexia), detrusor and sphincter dysynergy that develops secondary to the supranuclear lesions of the medulla spinalis, the bladder should be emptied, preferably by the patient's own intermittent catheterization, without residuel urine. If the bladder has not been emptied completely Volterra should not be taken.

Posology and method of administration:

Unless recommended otherwise by the doctor, the recommended dose for adults is 150 mg film-coated tablet once a month.
